Pound Notice

Notice is hereby given under Sec. 210 of the Rural Municipality Act, that

One Brown Mare, with HB on left jaw, right front foot with about two inches of white hair, two toes, white around top of hoof, small white star in forehead, foretop was clipped some time ago, weight about 100 lbs. was impounded in a pound kept by the undersigned, s. 12 9-29-7 w of 4 on the 11th day of May, 1918

WESLEY SOLE, Poundkeeper
Pound No. 2

Members of the American labor mission to Britain are charged by Sinn Feiners with being unfair to the Sinn Fein cause.

But what about the fairness of the Sinn Feiners to the Allies, including America—the goose that has been laying the golden eggs for Ireland's cause?

Swat the skeeter, or the skeeter'll swat you.

Breezellets

Russia may realize after a while what it means to make peace with a wolf, while the wolf is free to do what he wishes.

Worth repeating: The slacker is now being dubbed a "squash pie" because he is yellow all through and has not enough crust to "go over the top."

Germany is still making friendly requests from Russia with which peace has been declared, such as giving up the Black Sea fleet, and other little matters of the kind. What is a country's fleet between friends?

Among the Winnipeg sympathetic strikers who "walked out" last week, were the movie men.

The move of the "movies" was the last straw on the camel's back for the poor over-worked citizens of Winnipeg.

Last week end the British government suddenly dropped a bomb among the Irish Sinn Feiners—500 prisoners were captured.

British raiding parties give the enemy in the Arras sector a warm time.

Kind of Arras-ing the enemy considerable like.

"Lenine doesn't trust promises of the Germans."

Lenine is finding out the value of the Germans "scraps of paper"

British Columbia fruit will be more expensive this season, according to reports from Kelowna

Anyway, with most of us it will be a case of "sour grapes," particularly considering the price of sugar, too.

Members of the American labor mission to Britain are charged by Sinn Feiners with being unfair to the Sinn Fein cause.

But what about the fairness of the Sinn Feiners to the Allies, including America—the goose that has been laying the golden eggs for Ireland's cause?

Swat the skeeter, or the skeeter'll swat you.

R. M. of Golden Centre No. 272

The 4th meeting of the above council was held at L. C. Michael's Wednesday, May 1st.

All members present, except Councillor Fulton.

Minutes read and adopted Correspondence read and disposed of.

Dept. of Public Works was requested to survey roadway on n. ht 28 29-5, subject to confirmation of location of school site. Councillor Gardiner was instructed to measure diversion n.e. 16-30-5.

By-law 16, relating to Seed Grain Loans, was read three times and adopted.

Following accounts were paid:

J. J. Kelly, fees re Jeyes case 7.00
C. Bain, repairs to bridge 3.50
Oven hospital grant 125.00
Beaver Lumber Co 5.46
Road work in 30-4 35.45

The following loans were made:

Wm. Schofield, seed grain 50.00
E. B. Fulton " 200.00

S. J. MacIntosh 130.00

N. E. Woods " 197.50

J. E. Symes " 60.00

R. C. McMurray " 112.50

Delbert Baxter " 78.00

Chas. McMurray " 52.00

A. C. Stillwell " 30.00

F. M. Hopkins " 32.25

Fanny Adams " 138.00

A. D. Abramson " 195.00

Secretary was instructed to inquire if Act is enacted empowering to make loans for feed.

L. H. Wiley was instructed to remove rocks from road allowance, 31-30-4

Wages for road work were fixed as follows: \$4.00 per day for men; 7.00 for man and team; 10.00 for man and four horses; 5.50 for road foreman, without team, and 3.00 extra when team is used full time, said wages to be paid in cash.

It was decided to expend \$1000 in ward for road work, less any over expenditure in 1917.

Secretary was instructed to purchase 6 frosnos, 3 John Deere grading plows, 6 plow shares, and two dozen scraper handles.

The following poundkeepers were appointed for 1918: John Jarmain, John Thompson, John Dahl, S. A. Walper and T. Midleton.

A weed inspector for each rge

will be appointed next meeting

at a wage of \$6.00 per day and furnish own conveyance.

The following levies were fixed:

Old Folks' Coughs, Catarrh, Bronchitis Quickly Cured

This Tells of a Method That Cures Without Using Drugs.

Elderly people take cold easily. Unlike young folks, they recover slowly. That is why so many people past middle life die of pneumonia.

Cough Syrup seldom do much good because they upset digestion. Any doctor knows that a much more effective treatment is "CATARRHOZENE," which heals and soothes the irritated surfaces of the throat.

In taking Catarrhozene you do not take medicine into the stomach—you simply breathe into the throat, and the vapors help to clear the vapor, so full of healing power that colds, catarrh and bronchitis disappear almost instantly.

The germ-killing balsamic vapors, through the breath, descend the bronchial tubes, and finally reaches the deepest air cells in the lungs. All parts are soothed with rich, pure, medicinal vapors, whereas with syrup the affected parts could not be reached and harm would result through numbing the stomach with drugs.

A Catarrhozene Inhaler in your pocket quickly enables you to stop a cold with the first sneeze. Large size costs \$1.00, and supplies treatment for two months, small size, 50c; trial size, 25c. at all stores and druggists, or of the Catarrhozene Co., Kingston, Canada.

Carmen's Messenger

— BY —
HAROLD BINDLOSS

WARD, LOCK & CO., LIMITED
Lancs, Melbourne, and Toronto

(Continued.)

"Ah! he said, "you have heard from Lawrence."

"No, but the letter's about him," Featherstone replied, and sat down opposite, was silent for a few moments. His pose was slack and he looked as if he had got a shock.

"I don't see how you can help, but perhaps you better know how matters are," he resumed, and gave the letter to Foster.

It was short, but Foster, who was surprised and disturbed, understood his meaning. It had been written from Hudman, asking or rather demanding, Featherstone to meet him there next day, although he stated that if that was impossible, he would arrive at Galt on the evening of that day. There was a threat in the letter that it would be to Lawrence's advantage if Featherstone saw him soon.

"Well," said Foster dryly, "it looks as if our plan had succeeded better than we thought. We certainly didn't expect the fellow would follow me to England."

Featherstone did not seem to understand that with the object of saving himself, he had said nothing about Daly's having extorted money from Lawrence in Canada. He now explained the situation in a few words as possible.

"Lawrence ought to have told me!" Featherstone exclaimed. "I don't know that it would have been of much use. You see, Lawrence meant to put Daly off, to fight him. I heard it. I quite agreed." "But he can't fight," Featherstone objected in a strained voice. "I'd have urged him to do so, if it had been possible. We're not cowards." "What's the matter?"

"Don't you know?" Featherstone asked with some surprise.

"I know my partner's in trouble; that's all."

Featherstone hesitated as if he wanted to take the other into his confidence, but shrank from doing so. Then he said with forced quietness: "If this rogue knows as much as I suspect he can get my son arrested."

"Is that a serious charge? I don't ask what it is."

"It would mean a long imprisonment, to say nothing of the humiliation," Featherstone answered brokenly, with silence as deep as with the firelight on his tense face. Then he went on with an effort: "I must tell you what I can. Lawrence in a desperate moment injured his eye, and I am afraid he will die of course. The boy had got into difficulties, but hitherto, although he had been a fool, there was a certain generosity in his rashness. He was very hard pressed—I have seen that since—but you make no excuse for what he did."

"He made good afterwards," Foster interposed.

"We tried to think so, but it looks as if our son can't make good, or punishment has been worse done, or consented to, must be borne. Well, when I learned the truth I went to

the man my son had robbed and offered to repay him. He said he would take a month, for reasons that ought to keep us away, and we were away, because I knew he was hard and very just."

Featherstone paused, and Foster, who murmured a few words of awkward sympathy, waited with impatience: "I am a magistrate, pledged to do my duty, but I helped my boy to escape, and the man I was afraid of did nothing though he knew. After all, I wanted to help him, but he gave me to understand that he would not interfere so long as Lawrence stayed away, but must be free to take the proper line if he came back. In the end he told me that the damage was over, and then you told us how Lawrence had grown out of his folly and become a useful man. Although we longed to see him, our letters came, and I fear my wife is unable to bear the strain again."

Foster was moved by his distress. Featherstone was proud and honorable, and it must have cost him much to tell his son to let him go. Deep down, he thought what he had done then would always trouble him, and after all it had proved useless. The worst was that his sensitive upright mind, which he had kept from the unscrupulous adventures. But Foster did not mean him to be victimized. As a rule, he was rather humorous than dramatic, but he got up and stood with his hands clasped.

"This thing touches us both, sir. Lawrence is your son, but he's my friend, and I've got to see him through, which warrants my giving you the best advice I can. Very often you must show a bold front to Daly; to begin with, you can't go to him."

Featherstone gave him a grateful glance. He felt defeated and despondent. In Foster, however, he confidently resolute. At first he had welcomed him for his son, but had come to like him for himself.

"You agreed, 'I can't go,' but that doesn't help us, because he'll come here."

"Yes; he must be met. But do you know how he came to learn about the matter?"

"Yes, but my relative, who was interested in politics and social schemes, had a secretary. I can't remember his name, but this might be the fellow."

Then it's curious he didn't get on Lawrence's track before. Anyway, he must be met with the bluff direct now."

"How can he be bluffed?" Featherstone asked with a hopeless gesture.

"If I don't agree to his demands?"

"He would first have to tell the police all he knew, and as soon as he did this, his hold on you would be gone. Then the secret he'd kept, the secret, which would be remarkably hard to answer, although he might perhaps take the risk out of malice if he saw you meant to be well treated."

Enquirer. You are quite mistaken, you know, that the Canadian Food Board is a financial burden to the country. As pointed out by Hon. T. A. Crerar, minister of agriculture, the board collected more than twice the amount of money required to cover the total expenditure of the board.

Miss Roberto... You will be pleased to know that new and drastic regulations have been made by the Canadian Food Board to govern public eating houses of all kinds. Definitely hours are fixed for meals and the serving of meals is regulated to certain meal times. The amount of bread served is strictly limited; as is also the amount of butter and of the various meats.

Waste of food in the kitchen or elsewhere is prohibited by the new regulations, and waiters, cooks and stewards are made personally responsible as well as proprietors and managers. These regulations apply to all eating houses in the country, as well as in the cities and towns.

Mr. B. E. Judging from the tone of your letter you cannot yet have heard of the new waste and hoarding regulations recently issued by the Canadian Food Board. Under these

regulations, food manufacturers, dealers, importers, etc., are required to report either to the provincial or municipal authorities the case of which you speak.

Every woman who knows of hoarding or waste has a duty resting on her to bring the law to bear on the culprit.

Farmer's Wife. The boys of Canada are responding magnificently to the call from the farms. The R.O.S.C. and the Red Cross are doing their bit in up all the provinces and it is expected that the original estimate of 25,000 will be far surpassed. In several towns and cities in Ontario 100 per cent of the eligible students in the high schools and collegiate institutes are reported as having enrolled.

The farmer and his wife need have no fear of lacking help when as far as possible, their young boys with their vitality and enthusiasm are on hand.

Jean. The advice of Hon. Charles A. Dunning to the men of Canada answers your question pretty well.

German Bribery and Corruption Responsible for Any Gains Made

I look at the situation at the end of 1918, when the war began, half a year or three years and a half. What has been Germany's really important conquest in this struggle? It has been Russia. And how far, but by corruption, has she gone?

The German army, though inferior to the German military fitness and in morale, had the upper hand in East Prussia. This a sort of victory, but it was gained at the expense of the German generals, who had retreated from them at the start, overwhelmed them at the Mazurian Lakes.

Subsequently we have learned that this paralysis, which became chronic, was caused by treachery, and treachery as caused by German bribes.—William Rosic Traynor, in the Saturday Evening Post, for February 16.

Among the advertisements in a paper appeared the following: "The gentleman who found a purse with money and a request to return the address of the loser, as he is recognized." A few days afterward the reply was inserted: "The recognized gentleman who picked up a purse requested the loser to call at his house."

France!

"Bled white!" they said, now months ago. Yet forward, France still stands at the battle. Surer intellect, sterner soul, she stands before our blotted eyes, undaunted, radiating unconquerable as right and beauty and truth.—New York Tribune.

What Women Want to Know

Some Queries and Answers Regarding Conservation of Food

Lillian. Yes, you can add maple sugar to the maple syrup. I am sure that will be more appreciated. It is better adapted for transit than chocolate and you may be sure it will make your brother think of you as a good daughter.

It was a youngster and there was no thought of a world-wide war. There will be plenty of maple sugar and syrup this year if the farmer lives up to his word.

Domestic. You are fortunate to have such a good supply of potatoes.

It should stand you in good stead during the next few weeks while all the Dominion potato campaign will be in progress.

Canadians do not realize the usefulness of the humble potato.

Its virtues are endless. It stands pre-eminent among the vegetables used for food. It must be remembered that the most nourishing part of the potato lies next the skin in the form of an acrid oil which passes through the skin during cooking and escapes with the steam from a boiled potato. The composition of potatoes is as follows: Water, 78%; starch, 18%; protein, 2%; mineral salts, 1%.

If you are tired of cooking potatoes in the same old way why not try a few new methods? For instance, have you tried potato omelets? You prepare mashed potatoes, turn them into hot omelets, well greased, spread evenly, cook slowly until browned underneath and fold as an omelet.

Dishwasher. To clean potatoes and bread crumbs, add one-third cup grated milk cheese, arranging potatoes and cheese in alternate layers before covering with crumbs.

Mrs. Brown. In reply to your query the following scale may somewhat surprise you. It shows that despite Canada's natural advantages of soil, Canadian farmers harvest between one-half and two-thirds more bushels per acre than do the Canadian farmers.

Wheat. Germany, 35c; Canada, 21.04; rye, Germany, 34c; 34.3c; barley, Germany, 61.1c; Canada, 29.96c; Potatoes, Germany, 33.78c; Potatoes, Germany, 23.53c; Canada, 16.58c.

Enquirer. You are quite mistaken,

you know, that the Canadian Food Board is a financial burden to the country. As pointed out by Hon. T. A. Crerar, minister of agriculture, the board collected more than twice the amount of money required to cover the total expenditure of the board.

Have you Indigestion?

No. 15—EGGS

Your food will continue to disagree with you, and cause distress until you strengthen your digestive organs, and tone and sweeten the stomach. You can do this quickly and surely by promptly taking a few doses of

BEECHAM'S PILLS

Their natural action relieves the stomach of digested food, stimulates the flow of gastric juice, renews the activity of the liver and bowels, and strengthens the digestive system. Take them with confidence for 60 years' experience prove that Beecham's Pills

To talk to the farm woman about bringing coals to Newcastle and yet there are aspects of the egg market which never occur to her to see the eggs being shipped to the city. It is estimated that about 95 per cent of the eggs sold in Canada come from the United States, and the remainder from small poultry-keepers in villages, towns and cities. Most of the farm eggs pass through the hands of the country storekeepers. From them they go to the general dealer, either candlestick or to the trade, or to the grocer, who sells them to the consumer.

It is estimated that the greatest number of bad eggs which come on the market are in that state because of conditions on the farm. A small percentage of the blame is attached to the country store and still another to conditions under which eggs are shipped, or the loss that occurs in transit.

In taking measures to prevent losses, this is the first step must be taken by the farmer, as the greater the losses are intransit, the less will be the value of the eggs when they reach the market.

The most natural place for the farmer to sell his eggs is at the country store. Here he has the least trouble and gets the quickest return either in trade or cash, whichever he prefers.

It is estimated that the greatest

number of bad eggs which come on the market are in that state because of conditions on the farm. A small percentage of the blame is attached to the country store and still another to conditions under which eggs are shipped, or the loss that occurs in transit.

To get a clearer idea of how dairy products meet present-day needs, the following comparisons are made on milk:

One quart of milk on an energy basis equals: 8 pounds of eggs; 3.5 pounds of steaks; 7 oranges; .76 pounds of fish; 6.55 pounds of tomatoes; 1/2 dozen bananas; 79 pounds English walnuts; 35 pounds asparagus.

Figuring this on a price basis one quart of milk at 12 cents is worth as much as 60 cents worth of chicken; 28 cents worth of sirloin steak; 20 cents worth of eggs; 35 cents worth ofysters; 22 cents worth of fish; 40 cents worth of oranges; 21 cents worth of bananas; 21 cents worth of English walnuts; \$1 worth of asparagus; 17 cents worth of tomatoes.

Good milk is by far the cheapest animal food on the market today, and the more the consuming public uses it the cheaper will be their living expenses and the better nourished will be the people.

Good milk is by far the cheapest animal food on the market today, and the more the consuming public uses it the cheaper will be their living expenses and the better nourished will be the people.

Shelling the Road

Even Boche Shells Failed to Stop Sammies' Joking

"Hey Lieutenant, better not run on that road. Fritz can see it plain as day and he's been dropping shells on it all morning."

The warning came from a mud-apartured Sammie seated on the back of his horse of a muddy farm-house with his mess tin full of beans held between his knees. Mud and khaki made a perfect camouflage. You wouldn't have noticed him if he lay flat.

The British Lieutenant on the way back from brigade headquarters stopped his car. The shouted warning was supplemented by the unmistakable "racket" of trawling shells.

"It's a regular train-train sound."

A stone went through one of the forward mudguards, leaving a small irregular hole.

The Lieutenant and his driver got out. It was right on the edge of a mud-splattered shell-hole. A worn-work netting camouflage was supposed to hide the road but in eighteen months of stationary fighting hereabouts the Boche has obtained accurate registry of the town and road both, despite camouflage.

"Come back in town here Lieutenant," called the Sammies from his rock-pile luncheon. "Most of them in the village are still here. The Rue de Victory? It's safe here."

The Boche was starting up again. He tossed ten shells on the road and about thirty more into town.

With each explosion, the German drivers and the infantrymen ducked their heads, and after each duck they looked up with sheepish grim at one another. One high-explosive missile exploded in the middle of the crowd of another hole in the Swiss chateau front wall of a destroyed dwelling across the street. It struck square in the middle of the "Chocolate Meier," sign.

"Ball's-eye," said Sammie, looking up from his hopeless search for a morsel of pork and beans.

"Say," he demanded, turning to the driver, "what do you guys get to eat?" "We have beans and bacon," said the fat and pale Polacks in it. To-day we get pork and beans—only it's theoretical pork."

The shelling became fairly hot. Seven or eight shells exploded and high explosive shells boomed over the town, in the ruins and in a row along the road. Sammies and Polaks appeared in twos and threes from unobservable nooks in the houses and crawled to the doorway under the masonry.

In those towns you'll notice that all the emergency dugouts have their entrances facing toward interior France, away from the direction of the shelling. They are placed there in case of a standstill whenever there's a standstill.

"Wonder where that one went,"

said the driver after one loud burst. He ran through a hole in the wall to investigate a fresh shell hole at close range.

The Lieutenant was under fire for the first time. However he felt about it he maintained an outward calm—almost unconcern—for the benefit of his men who had just now poked out of the nearest dugout. "Come in here. You'll get hurt if you stick out there."

"Well, a man's got to eat hasn't he?" said the fat Polack. "That dugout's a fellow can't enjoy his down there."

The Lieutenant called his driver. They climbed back into the machine and began a two mile run parallel to the front, under enemy observation all the way.

"Well, I've done my part! I warned," said Fat, speaking the ultimate bean.

Manitoba Farm Loans

Valuable in Connection With Greater Production on the Land

From its inception on May 1st, 1917, to December 31st of the same year, the Manitoba Farm Loans Association, lent to farmers of the province \$6,750,000 per cent per annum loans aggregating one million dollars had also been authorized. The low rate of interest, together with the easy terms of repayment in equal sums extending over thirty years, has been a great boon to farmers, and there are already indications that the service rendered is very valuable in connection with greater production on the land. Many farmers have been enabled to increase their acreage and prepared for crop this year, others have acquired cattle and many who were renting have been placed in a position to purchase their farms.

The Decoy

A good story is told by the Dean of Carlisle. It concerns a clergyman who, taking occasional duty for a friend in one of the smaller churches in the remote corners of Cumberland, was one day greatly scandalized on observing the old verger, who had been collecting the offering, quietly abstract a half-crown before presenting the plate at the altar rail.

After service he called the old man into the vestry and told him, with emotion, that his crime had been discovered.

The verger looked puzzled. Then a sudden light dawned on him.

"Why, sir, you don't mean that half-crown of mine? Why, I've left off with him this last fifteen years!"

Carlisle Chronicle-Telegraph.

There is an increase of 35 per cent. in the hog production of Alberta, Hon. Dundas Macpherson declared at a meeting of Alberta stock breeders.

At the same meeting G. H. Huston, superintendent of the experimental farm at Lacombe, claimed that a saving of 100 per cent. in the production of pork could be effected by the use of rape pasture for hogs.

Your Own Garden

The Joy and Benefit to be Derived From Garden Work

The greatest value that will accrue to the village and town dweller from the pleasure it gives, especially to the young men and women that are coming on to take the places of us grown-ups who have lost so much of our knowledge of soils, of fertilizers, of cultural methods, of special adaptation of plants to soils and climate.

The laws of plant life, of soil biology, of what makes a fertilizer build up are little known in the agricultural world—much less in America than in agricultural Europe. When boys and girls grow crops they are not taught to know why some plants do well or poorly, why the plants are not uniform in size, why some leaves are pale or yellow and some are dark green, why some are broad and healthy and some are narrow and wrinkled and curled. When they discern that it is caused by hunger, thirst or drowning by excessive use of water, they commence to study the plants and learn to grow them, no matter how long these children live. Then they soon learn that plants live and feed like themselves do, that they need sunlight, water, air, food and drink of the kind and amount they require; that to be healthy, robust and strong plants and animals alike must have the same elements of outdoor life, the same kinds of animal and vegetable foods.

The American people would be much more healthful if they are if they would use less meats and more and more vegetables, instead of a diet of concentrated minerals that act as antiseptics and neutralize the acidity produced by such foods as meats and cereal starches which contain a large excess of acids. The use of grasses and cereals and vegetables for the same reasons. Horses fed on grain alone soon become incompletely nourished.

One of the most important about which the popular garden work is that it will never die; once our city folk know the pleasure and profit to be derived they will keep on. It will not require war and war prices to make them do so, but an instant, will develop latent abilities in the young that may otherwise never be brought out. There will come from the love of country and rural life, accompanied by the development of taste among students for problems that will benefit mankind for a century to come. Many Luther Burbanks even greater than he will follow, and they will help our people to develop the highest ideals of the true fitness of the arable lands of America, whose yield is far below that of European countries whose multiplying populations have demanded a larger output of foodstuffs. We are now where Europe was a century ago.

The moment has come when our necessities are demanding that we learn and work in harmony with the laws of plant life, and when we have learned that, other laws of life and nature. By application and observation we may easily learn when they have been obeyed or disobeyed. He who multiplies his knowledge and skill will be a blessing to his fellows. —From the Los Angeles Times.

Test Eggs for Hatching

This Will Save Much Trouble Later in the Season

Eggs which are not clear when laid are often laid in the incubator. Often one finds eggs having a number of red lines radiating from a central point. These red lines are the blood vessels of the developing chick. If these are visible, the egg has already started to develop. These eggs, if placed in the incubator, will hatch prematurely and an irregular hatch means weak chicks; an egg cracked or damaged on one side, or has black spots, it is a rusty egg to incubate.

Egg testers can be obtained for a small price or will be furnished with your incubator and may be purchased later in the season. Many people test their eggs by allowing light to shine through a two inch hole into a dark room. The eggs can be held in front of the opening, and viewed from the dark side any imperfections will be noted.

The Sian Feiners are Helping

The extreme men of Parnell's time, some of them called "the Sian Feiners," helped himself gain his ends, though they always regarded themselves as essentially independent of him; the Sian Feiners of today, all of them, are helping him, and are giving great assistance to Sir Horace Plunkett in his endeavors to reach an Irish settlement through the convention, although they do not see it, and still furthering his aims.

Germans, much heralded boast that her labor standards are the highest in the world and that her workmen are the most satisfied, best treated and highest paid, has been shown to be pure German propaganda. Recent investigation in 1913 shows that conditions of the workers in all industries in Germany were much inferior to those of either France or Great Britain. The cigar manufacturers, the mining industry, German made "substantial agreement" between the various sections of the convention's delegates.—John McGrath, in the Fortnightly Review.

Worth His Best

A young couple went to a minister's house to get married. After the ceremony, the bridegroom drew a clergyman aside and whispered in his whisper, "I am sorry I have no money to pay your fee, but if you'll take me down into the cellar I'll show you how to fix your gas water so that it won't register."—San Francisco Argus.

Chickens should be hatched early this year so that they will mature on the fresh green stuffs of the summer season. Starved feed is found to be big this year.

War on the German Language

American Paper Advocates Making German a Dead Language in U.S.

"Throw German text books and the pro-German teachers out of the public schools! Make German a dead language, so far as the rank and file of America are concerned!" Thus reads the title of a pamphlet issued by the American defence society as a counterblast to the activities of the German-American alliance.

Germany's most dangerous weapon is its language. Not her armament can be overthrown. Not her machine-like army. That has been repeatedly hurled back by the living armistice freedom. Her most dangerous weapon is the propagation of ideas.

While with her hands she murders and despoils, with her voice, she invades parleys.

When liberty is in peril, there is no way to stop her.

Voice warnings against such disaster are raised at this time none too soon. Pointing to Russia as an example of what the present situation may lead to, the pamphlet states before St. David's Society of New York the other day, that the chief danger to America is psychological. Let there not steal over people "the German spirit" and the German language.

On these grounds it is urged that America turn her back entirely on Germany and all her works, reject her "kultur" and ignore her language.

The use of the signs of German power in German reminds us of the murder of a million helpless old men, unarmed men, women and children; the driving of a million people from their homes, the burning of their houses, the killing of their wives and children.

On these grounds it is urged that America turn her back entirely on Germany and all her works, reject her "kultur" and ignore her language.

Horse Meat Prices

Take a Jump in the U.S. Owing to Popular Demand

Horse meat is beginning to take a prominent place on America's food plate.

Great demand is the demand for the food introduced not very long in several American cities, that prices have jumped considerably.

In one western city the price of horse meat has risen from 9 cents a pound six months ago to 15 cents, according to reports to the U.S. food administration and the department of agriculture.

The popularity of horse meat, according to the U.S. food administration, has increased with the higher prices charged for other foods.

The popular aversion to horse meat is rapidly waning, this official asserts.

"Among the cities that have enacted ordinances permitting the sale of horse meat for table food are New York, Cincinnati, Toledo, Omaha, and several other cities this official said.

"In these cities the ordinances provide for the sale of horse meat in sizes and for other meats sold.

"The cheapness of the meat makes it accessible to the poor laborer whose wages do not keep up with the increase in the cost of living.

"During the past year a half million horses have been disabled from age and serious injuries each year. A great saving would be accomplished by using them for food.

"Horse meat makes a tough, but sweet steak. Only popular sentiment prevents its wider consumption.

"I anticipate that within a short time horse meat will be as common as ham and—

The Boy and the Farm

The Need of Supplementary Labor Is Going to Be Very Great

The federal minister of agriculture reported that the services of 25,000 schoolboys upon the farms of the country during the ensuing summer. While this number is increasing, it is not possible to greatly increase it. Of boys between the ages of ten and twenty attending the schools of the country there is a total, according to the last census, about 350,000. If one could be secured, he would be an army of over a hundred thousand schoolboys.

"Boys who are to be secured, he would be an army of over a hundred thousand schoolboys. In the collegiate institutes and high schools of Ontario alone there is an abundance of about 10,000 schoolboys, most of whom are old enough to render substantial assistance.

"There are about eight thousand farms in the Dominion, and as few relatives as possible are available to secure the services of boys for sheep feeding purposes, as it is a low wage, and the cost of feeding is high.

"Consequently, through the efforts of those who understand the value of sheep feeding, it is believed that the number of schoolboys available for service upon the farms of the country will be increased by twenty-five thousand.

"A few months of farm life will be good for the boys as well as profit to the country. —Toronto Globe.

Keep a Pig

It Will Help Keep You, or Pay for a Victory Bond

During the summer of 1917, a number of conferences were held at various points in Canada for the purpose of securing additional labor for the production of food.

Farmers and breeders were everywhere urged to keep and breed extra sows. As a result, the pig stock commission reports that the number of hogs to be increased to 25 to 30 per cent. during 1918. The first step towards an increase in our own supply has thus already been taken.

The next step is to see that these extra pigs are fed and fattened. The feed situation is acute. Many farmers who have been able to breed and winter an extra sow or two will not be able to feed and fatten them throughout the entire spring and early autumn, it would be difficult to keep them fed off the garden and kitchen refuse, and finished off in the fall upon an increased meat ration.

There are thousands of people engaged in agriculture, especially small settlers who could, and should, help in this way. It is past the time for "doing your bit"; it is now time to "do your utmost".

Do not let the kitchen garden waste go to waste. Feed your pigs to a pig. A properly cared-for pig is not a menace to public health. What you do in this matter may mean the difference between somebody "over there" and somebody "over here". Decide now and begin to get a place ready to keep a pig.

Mayor Church of Toronto, tells a story of a friend whose stoutness and constant good humor are his chief distinctions. "We happened to be talking about the subject of gastronomy," said the man, "and my friend's tremendous girth prompted me to ask him if he followed any set rules to guide him in his eating. 'No,' he said, 'I have just one rule,' he replied, 'and that is, never eat to饱.' Decide now and begin to get a place ready to keep a pig.

"This paper says that we should give our shots a day off occasionally." "To rest their weary soles, eh?"

Major Church of Toronto, tells a story of a friend whose stoutness and constant good humor are his chief distinctions. "We happened to be talking about the subject of gastronomy," said the man, "and my friend's tremendous girth prompted me to ask him if he followed any set rules to guide him in his eating. 'No,' he said, 'I have just one rule,' he replied, 'and that is, never eat to飽.'

"This paper says that we should give our shots a day off occasionally." "To rest their weary soles, eh?"

To Speed Shipbuilding

Ships are Welded Together Without the Use of Rivets

German sailors and U.S. sailors are fabricating ships. That is one of the two reasons why she is able to launch a new submarine for every gun or depth of water.

Germany's ships are built along the lines of the U.S. food administration, said the spokesman. The reason for her speed production is that the vessels are not only fabricated, but are welded electrically, a process which saves their skins.

The new U-boats are riveted, according to the most authentic information obtained by the British admiralty. The great yards and the submarine yards along the coast of Belgium are being turned out from four to six electrically welded craft in the time ordinarily required to construct a single vessel.

Standardization and fabrication to obtain wholesale ship production were approved long ago by the Admiralty.

"The great saving that can be made by using rivets is the cost of riveting," said the spokesman. "It is a slow, laborious process.

"The popular aversion to horse meat is rapidly waning, this official asserts.

"Among the cities that have enacted ordinances permitting the sale of horse meat for table food are New York, Cincinnati, Toledo, Oregon, and several other cities this official said.

"The popularity of horse meat, according to the U.S. food administration, has increased with the higher prices charged for other foods.

Elapsed time 44 days
Total mileage 22,022.3
Average speed per hour 25 miles
Average speed per gallon 18.1 miles
*Longest day's run 569.3 miles
Smallest day's mileage 18.1 miles
Greatest average miles per gallon 28.3 miles
Average tire life 22,022 miles
**Note that longest day's run was made on last day of the test.*

N.B. The Canadian gallon being 20% larger than the American gallon, on which latter basis above test was run, the miles per gallon figures should be multiplied by 1.20 to obtain the true figure. In Canada the correct ratio of miles to the gallon.

C. R. BROWNELL,
Dealer
Chinook, Alberta

You know, of course, that the Maxwell Motor Car is the long distance champion of the world.

You have read that a "stock" Maxwell 5-passenger car ran for 44 days and nights without stopping the motor.

And that, in the 44 days non-stop test, the Maxwell covered 22,022 miles, at an average speed of 25 miles per hour.

But have you, up to now, realized the full significance of that performance?

Do you know that no other motor car in the world has ever equalled or even approached that performance?

In a word, did you take this test seriously when you heard of it?

Or did you set it down as a "selling stunt" to give the publicity man something to talk about?

It's worth your while to read and to study the conditions under which that test was made.

You know that the American Automobile Association (familiarly known as the "A.A.A.") is the official arbiter of every automobile test and contest.

But perhaps you didn't know that when a maker places his product under A.A.A. supervision he must do absolutely as told and abide by the decisions of the Board. That's why there are so few A.A.A. Official Records!

This 22,000-mile Maxwell non-stop test was official from start to finish.

Therein lies its value to you.

It proves absolutely the quality of the car—the very Maxwell you buy.

For verify this was a "stock" Maxwell. Listen:

First: the inspectors disassembled the motor to see that no special pistons, valves, bearing-metal or other parts had been used.

Every other unit was as critically inspected. Then the car was re-assembled under their own supervision.

As we had much at stake and the test was made in winter (November 23 to January 5) we asked permission to take certain little precautions against accidental stoppage.

Sounds reasonable, doesn't it?

But they refused permission to do any such thing.

For example:—They would not permit a rubber cover over the magneto—it wasn't "stock."

They refused to let us tape the ignition wire terminals—they are not taped on the Maxwells we sell—so of course it wasn't "stock."

Neither would they let us use a spiral coiled pipe in place of the usual straight one from tank to carburetor to guard against a breakage from the constant, unremitting vibration—it isn't "stock."

Not to use a special high priced foreign make of spark plug—the run was made on the same spark plugs with which all Maxwells are equipped.

So rigid were the rules, we were unable to carry a spare tire on the rear—it wasn't "stock." A telegram to headquarters in New York finally brought a special permit to carry a spare tire.

"It isn't stock!" "It isn't stock!"

That was the laconic reply of those A.A.A. inspectors to every last suggestion that called for anything but the precise condition of the standard, stock model Maxwell that any customer can buy from any one of 3000 dealers anywhere.

We are glad now—mighty glad—that the rules were so strict and so rigidly enforced.

Any other car that ever attempts to equal that record must do it under official supervision—and comply with the same terms.

And it will have to go some.

For Maxwell set the standard when it performed this wonderful feat.

Maxwell complied with those rules—and made good.

Every drop of gasoline and oil and water was measured out and poured in by the inspectors themselves. They would not even let our man pour it in!

Every four hours the car had to report at the official station for checking.

And it had to be there on the minute.

And every minute there was an inspector beside the driver on the front seat—two more men in the rear. One got out only to let another in—day and night for 44 days and nights!

There was one technical stop.

It is interesting to know the circumstances.

Dead of night—a driving storm—a cloudburst—suddenly another car appeared in the road ahead.

In his effort to avoid a collision the Maxwell driver stalled his motor.

At least the observers thought it stopped and so reported.

The car did not stop, however, so its momentum again started the motor (if it had indeed stalled) when the clutch was let in.

The contest board exonerated our driver on grounds that his action was necessary to save life.

That shows you how rigid were the rules—how conscientiously applied by the observers.

You who have owned and driven motor cars—you who know how small a thing may clog a carburetor or a feed pipe; "short" a spark or stall a motor—will realize what a wonderfully well made car this must be to go through that test under those conditions—44 days—22,022 miles without stopping.

The exact amount of gasoline, of oil, of water used; the tire mileage, tire troubles, tire changes; the distance and the routes are matters of official record, attested under oath and guaranteed by the A.A.A.

(By the way, the average was nearly 10,000 miles per tire.)

Any Maxwell owner—or anyone interested may see those records.

And—here's the most wonderful part—though no attempt was or could be made for economy; the Maxwell averaged 22 miles per gallon of gasoline.

Some other car may, some time, equal some one of those performances. But to equal them all in the same test—that car must be a Maxwell.

SYNOPSIS OF CANADIAN NORTH-WEST LAND REGULATIONS

THE sole head of a family, or any male over 18 years old, may homestead a quarter section, containing 160 acres.

Settlers of Alberta—Applicants must appear personally at Dominion Land Agency or Sub-Agency for the District. Entry may be made at any Dominion Land Agency (but not Sub-Agency), on certain conditions.

Domestic minors may homestead a quarter section of land in each of three years. A homesteader may live within nine miles of his homestead on a farm of at least 80 acres, on certain conditions. A "habitable house" is required, except where residence is provided in the vicinity.

In each district a homesteader in good standing may pre-empt a quarter-section alongside his homestead. Price \$1.00 per acre.

Duties—Six months residence in each of six years after earning homestead patent; also 50 acres extra, called a "surplus," which may be sold as a homestead on certain conditions.

A settler who has exhausted his homestead right may take a purchased homestead in certain districts. Price \$1.00 per acre. Duties—Must reside six months in each of three years, cultivate 30 acres and erect a house worth \$500.

The area of cultivation is subject to reduction in case of rough, scrubby or stony land. Live stock may be substituted for cultivation under certain conditions.

GERMANY IS ALREADY LAYING PLANS FOR NEXT GREAT WAR

ENEMY SPREADING THE GOSPEL OF CONQUEST

Peace That May Be Concluded With Germany That Does Not Involve Her Destruction as a Military Power May Only Be Regarded as a Mere Armistice

If an Englishman should now write a book discussing the possibilities of the next war, assert that war is the best occupation of mankind and that to prepare for it we should cultivate the spirit of war, to preserve the aristocratic idea, he could in the first place get nobody to publish it. If he produced it at his own expense he might consider himself lucky if he could sell his manuscript. Otherwise he would be lynched. Yet such a book has been written in Germany by Lieutenant-General Baron von Freitag-Loringhoven, at the cost of 100,000 marks. The book of Bernhardi, which did so much to develop in the German people the spirit that has horrified the world in the past three years, was a mere drop in the ocean compared with this. It is a most irresponsible theorist, no fanatic with a hobby that has unhinged his mind. He stands high in the war councils of Germany. He is the spiritual confidant of Ludendorff.

In fact, the department chief of the general staff of the German army, His book, entitled "Deductions from the World War," was published last fall, and is said to have had a great influence. Efforts to banish it from circulation outside the country were made, but a few copies were smuggled out, and from one of them an English edition has been prepared.

Its importance is such that it is about to impress upon the public the significance of this work. It confirms an opinion that has been more than once expressed in these columns, namely, that the Germans must be regarded as the chief instigators of the war. President Wilson is reasonable to suppose that the German people know themselves best, and if there are any yet who persist in the doctrine that "Germany has done us wrong" let them turn to this book. They will find that it is a mere trifling, which will enable her to raise another army and make another bid for world dominion.—Toronto Mail and Empire.

The Shaven Soldier

Modern Warrior Less Ferocious But More Efficient in Consequence

When the Indian braves of old, men of whom unquestionably worthy of their kind, if firm attendants and physicians, until quite lately some such appear to have been, entered the camp of President Wilson, it is reasonable to suppose that the German people know themselves best, and if there are any yet who persist in the doctrine that "Germany has done us wrong" let them turn to this book. They will find that it is a mere trifling, which will enable her to raise another army and make another bid for world dominion.—Toronto Mail and Empire.

It seems incredible that after this war Germany should still have a taste for shaving, but it is plain that Baron von Freitag-Loringhoven is acting on this belief. There is only one thing that will cure this malignant beast in the German mind, and that is absolute overthrow by the sword, bayonet, suffocation and a league of nations that will constitute itself an armed guard of Germany for a generation and more to come. The baron brought up the idea of riding the world over by means of mutual agreements. He admits that there will be agreements, but says that occasions must continue to arise when the forces in the field will require to be controlled by an agreement made years before. The notion of a universal league for the preservation of peace is ridiculous, he says, and any prud-spirited nation would be foolish to organize as "intolerable tutelage." Equally Utopian, therefore, is the idea that Germany herself should be invited to join such a league. There is a fact, however, that a league before the war began; that is to say a league of nations that would not provoke war. Germany was supposed to be a member of it. Hence the present stand.

Prussia spreads the gospel of war among the German people. If he has any regrets as a result of the developments of the present war the chief is that the German people are sufficiently stupid. He quotes with approval the words of Frederick, who wrote in 1768: "The military art demands continuous study if one desires to attain a thorough mastery of it. I am far from flattery

Western Canada Irrigation Conference

Annual Convention to Be Held at Nelson, B.C., This Year

Nelson, British Columbia, is preparing for the biggest event in the history of the Western Canada Irrigation Association, when the annual convention is held there next summer.

Irrigation is playing a bigger part in Western Canada's crop production than ever before, and the Western Canada Irrigation Association aims to assist in the development of the agricultural resources of the country by affording occasion at intervals for the discussion and solving of the problems which confront the irrigator, and other addresses of recognized authorities on various phases of agricultural life. Not so long ago it was the boast of some that they did not require irrigation in order to carry on their agricultural operations. A very great change has come about in the public attitude toward irrigation, however, and the central association, as Nelson recognizes frankly the advantages that may be derived from the artificial use of water. Indeed, Nelson sent very strong representations to the con-

The Kaiser's Challenge

From a Speech at Plymouth by Lord Milner

It is not now a question of destroying Prussian militarism. The question should destroy it and make end of all that the freedom-loving peoples of the world have been striving for centuries and are still striving for. And that task is perfectly feasible and if any good is being done in this country—and I believe we are at heart all peace-lovers—have at any time in these last thousand years been in doubt as to what we were fighting for, today. I know it has been suggested that, if we could only make it clear to the German people that we had no desire to destroy Germany or to dictate to her as to her form of government, the peace party in that country would be greatly strengthened, and could be brought appreciably nearer to termination of the terrible conflict which is devastating the world and threatens to engulf civilization.

Lord Milner contended that we have much to gain by this. The latest speeches of President Wilson and of our own prime minister leave no doubt whatever that neither America nor this country can believe this is true unless all the allies are willing to dismember the German people or to interfere with their clear right to decide for themselves under what constitution they choose to live. We must fight to defend the German people of their independence or of their fair share in the trade and intercourse of the world, always provided that the same independence, the same determination, the same right to a "place in the sun" are effectively ensured to other nations, especially the smaller nations, like Belgium and Serbia (cheers); who have had the past century of German domination. If that were all that Germany desired the end of this long agony of mankind might not be far distant.

And may be this is all that the British people, the people do desire, and maybe a time will come when, through pressure from below, this moderate temper will be reflected in the actions of the German government. We are told, wants peace, but it must be "German peace." "We desire to live in friendship with neighboring nations," says the emperor, "but that the members of the German arms must first be recognized." To that challenge there can be only one answer. It is the answer we gave to the Boers of South Africa when we got to Namibia, where he was much nearer master of the whole world than the German emperor now is, or ever will be.

Another Price Rise

Compensation by Government for
Diseased Animals Slaugthered

A bill will be introduced by the minister of agriculture at the present session increasing the amounts to be paid by the government to the owners of animals slaughtered under the operation of the Animal Contagious Diseases Act. The amount to be paid must not exceed in the case of grade cattle \$1.50 per head, and \$2.00 for each pig or sheep. In the case of pure-bred animals the amount to be paid will not exceed \$500 for each horse, \$250 for each cow, \$100 for each dog, \$75 for each pig or sheep. These amendments to the act are to remain in force for three years.

Permits for Canadians

Food Supply for Wives and Dependents in England

A matter which closely affects the wives and other dependents of Canadian soldiers now in England, is their position under the food rationing system, which is to be extended over the whole country. It has been laid down especially that all officers, sailors and their families (with any servants) will be in possession of the power to deal in foodstuffs, except for observation from the air. Such permit will be issued on the state on it the total number of persons comprising the soldier's household, and in the case of women will contain an undertaking that they will not draw starvation or dependent allowances. Each permit is available for three months.

The amount of the articles to be purchased at the institution will be limited in accordance with the periodical orders of the food controller.

Value of Grain Screenings

Preventing the Waste of Small or Broken Grains or Seed Weeds

Three years ago the seed branch of the department of agriculture, at Ottawa, published a bulletin on the feed value of grain screenings, which included the results of feeding tests made on the different species of grain. Owing to the growing scarcity of feeds, the elevator operators have paid more and more attention to these screenings with a view to reducing the waste of grain.

The directors of seven Japanese shipyards, have decided to offer to supply 1/4 tons of shipping to America for every ton of steel despatched from America. They are agreed to undertake to supply nearly 300,000 tons of shipping to America.

"I notice that a woman prominent in war activities got hurt in a motor accident."

"Was she badly injured?"

"Evidently not. The car turned turtle. When it was raised she was found underneath it, still knitting away for dear life, but much flushed because she had dropped a stitch."

The bulletin entitled "Grain Screenings," already referred to, may be obtained from the Publications Branch, Department of Agriculture, Ottawa.

RENNIE'S SEEDS

For HIGH Production

LOOK FOR THE STARS

Every page in the Rennie 1918 catalog is a guide to War-time production. But these stars are the best guides. Look for them and call your attention by a star border such as enclosed this.

SEEDS of high productive power are a vital War-time necessity. Not only must every square yard of available ground be made to produce, but Rennie's Seeds must be sown to ensure the finest possible crop. It is a War-time duty. When buying from dealers insist on Rennie's. The following seeds can be obtained from dealers or by mail.

THE SUPERIORITY OF CIVILIZATION OVER METHODS OF BARBARISM

THE SUPERIOR INVARIABLY DOMINATES INFERIOR

All of the Uncivilized Methods of the Enemy, While at Times Coming as a Surprise to the Allies, Have Been Systematically Met and Overcome

In one of his informing articles in "Land and Water," Mr. Hilaire Belloc points out in a striking way the growth of superimposed agriculture and the corresponding decline upon the side of enemies, as illustrated by the war. He remarks that the great war has seen three waves of this sort. After the first wave of this sort, after the battle of Marne, when the German army was shattered and broken at the Marne, and held before Ypres, Europe began to recover itself, and during the next six months the superiority of British methods of agriculture was established. Then came the third wave, through the treachery of the king, Bulgaria was brought in, but that advantage was soon counteracted by the entry of Russia into the war. It has just now entered into the race in the rapid development of heavy artillery, on a scale before which nothing in an age of civilization had ever been seen. As the enemy goes just as clearly as the Allies, just as Mr. Belloc points out, we were catching him up and passing him when he got his first respite through the inability of the eastern Slavs to maintain their rank, and, lacking of industrial power. He got his second respite when, through the treachery of the king, Bulgaria was brought in, but that advantage was soon counteracted by his third and greatest respite. Following up the effect of the submarine warfare before we had begun to catch up on the also enjoyed the general success of the Russian revolution and the subsequent disintegration of that country. The fruits of this greatest of his successes were soon apparent in Italy, as they have been in France, and in the continuation on the western front. But the process, as Mr. Belloc so well remarks, is again at work by which the superior invariably dominates the inferior. The battle of the Somme, for example, quickly reduced, though not for observation from the air, these fortresses would have stood indefinitely. This new piece had taken about three years to design and construct, the hour and a half of the Somme. Paris decided that the moment for a successful surprise had come. While these great engines were known to exist, their effect was a complete surprise. Civilization would have long ago disappeared under the attacks of barbarism but for this process, and, although it is exceedingly slow, it is a sure and certain way to win the war.

Mr. Belloc gives one impressive example. In August, 1914, the German cavalry had been first employed. The Germans who alone were thoroughly preparing and planning for war, had worked out the effect of the submarine warfare as calculated by the new and hitherto impossible method of observation from the air. The result was that the ring fortresses, upon which the German army had been built, were quickly reduced, though not for observation from the air. These fortresses would have stood indefinitely. This new piece had taken about three years to design and construct, the hour and a half of the Somme. Paris decided that the moment for a successful surprise had come. While these great engines were known to exist, their effect was a complete surprise. Civilization would have long ago disappeared under the attacks of barbarism but for this process, and, although it is exceedingly slow, it is a sure and certain way to win the war.

The French faced the problem at once, and very shortly. And so did the Germans, who, as a result of the Somme, had a complete and absolute control of the air. The result was that they had a complete and absolute control of the air. The French faced the problem at once, and very shortly. And so did the Germans, who, as a result of the Somme, had a complete and absolute control of the air. The result was that they had a complete and absolute control of the air.

Another example is the introduction of poison gas, to the horror of civilization. The civilized nations quickly beat the Germans at their own game, and prepared and developed methods against such a gas. We elaborated better ones. He came into the field with a just appreciation of the machine gun, and the grain elevator. The result was that they had a complete and absolute control of the air.

A Kidney Remedy

Kidney troubles are frequently caused by badly digested food which overtakes these organs to eliminate the irritant acids formed. Help your stomach to properly digest the food by taking 15 to 30 drops of Extract of Caraway Seed, and your kidney disorder will promptly disappear. Get the genuine. 7

The German Emperor
By J. W. Gerrard in "Face to Face With Kaiserism"

These talents and abilities and agreeable personal qualities of the German emperor must not blind us to the fact that he is the centre of the system which has brought the world to a despair and misery such as is never known in the annals of history. We must remember that all his utterances disclose the soul of the conqueror, of a man intensely anxious for earthly fame and a conqueror placed in the gallery of human events. In view of the greatness of the past, his ears are tuned for admiration and applause that they fail to hear the great longings of a nation, the center around the world. His eyes are so blinded with the sheen of his own glory that they do not see the maimed bodies, the crime, the pestilence, the misery that sweep the earth from the jungles of Africa to the frozen plains of the north, from Siberia to Saskatchewan, from Texas to Trieste, from Afghanistan to Germany. He has become the dark angel of mourning to millions upon millions of desolate homes.

Willing

"No, madam," said the lazy tramp, "I'm sorry but it's ag'in my principles. I can't chop no wood." "What would the farmer's wife think if we see some more?" "I'm sorry ag'in, but I can't carry no coal. But I'll tell you what I will do. I'll compromise. If you've got a gas stove I'll turn on the gas for you." —Boston Transcript.

Cure for Fever and Aque.—Distinguishing the standard fever from a cerebral attack of fever and aqua, showing derangement of the digestive organs and deterioration in the quality of the blood. In these ailments Parmele's Vegetable Pills have a decided effect in removing the fever and subduing the aqua in a few days. There are many who are subject to these distressing disturbances and to these there is no better preparation procurable as a means of relief.

Magnificent Diamond

Valuable gifts, including a magnificent diamond, have been presented to the Canadian Red Cross Society. Discovered in 1901 in the De Beers Mines, Griqualand West, the diamond was cut in Amsterdam, and now weighs two hundred and five carats. It is a pale canary stone, much more luminous than a white stone. In the top facet of the stone a Maltese cross is distinctly visible. The diamond is set in a ring, and it has been mounted as the Red Cross diamond, and is probably the largest yellow diamond in the world.

Gaining On Her

Draughts—How did you find that hair restorer I sold you a fortnight ago?

Honsepck—Great! My wife can't pull out her hair fast enough to keep up with it.

Delicate Young Girls, Pale, Tired Women

There is no beauty in pallor, but proof of plenty of weakness. Exercise makes your heart flutter, your back and limbs ache, and you sadly sink into your system. Try Dr. Hamilton's Pills; they make you feel alive, make you want to do things. They renew and purify the blood, tone it strong, give you robust health, laugh and sing. Helped in a hundred ways by Dr. Hamilton's Pills, which are an old family remedy of great repute, and never have any sickness of any kind. Get a 25c box today. Sold by all dealers.

Worth Asking For

A Free Offer Is Made by a Reliable Firm

There are very few people who are not in some measure familiar with the name of Dr. Chase's Kidney-Liver Pills, and in many homes these well-known preparations occupy first place in the family medicine chest. To those who may not as yet have given them a trial, we offer a free offer is being made of one 25 cent box of Dr. Chase's Kidney-Liver Pills, one sample box of Dr. Chase's Ointment, and one copy of Dr. Chase's book, "How to Live." Interested in order to take advantage of the above offer is to write to Edmondson, Bates & Co., Ltd., Dr. Chase Bldg., Toronto, mentioning the name of that paper, and enclosing a 2-cent stamp to pay postage.

For Farmers Only

A handbook for farmers has just been issued by the commission of conservation. It treats of tillage, use of manures, the selection of clover, grasses, the farm garden, weeds and insect pests, and other farm topics, in an informative and as popular manner. The quantity is limited and the booklet will be supplied on request only to bona fide farmers.

A Soldierly Accomplishment

Quickness Is Needed in Preparing Trenches to Repel an Attack

The best thing an infantryman does is dig. He learns to dig frantically, for many times during a year in the trenches his soul has won at the risk of his life.

This is best illustrated in the case of a successful attack . . .

The fourth trench—the last to be taken—is where the real work of activity ensues. One second wasted may mean the difference between life and death.

The reason for this is that it is now a maximum of the fighting on the western front that a counter-attack may reasonably be expected within five minutes after a set of trenches has been captured. And this is because the enemy, in making a counter-attack, naturally hits first at the trench nearest him, which is the fourth one captured—in the successful attack—because it is very necessary to gain the ground on the other way, pile up the sandbags, piles and other obstructions, for breastworks, throw up barbed wire and fasten it to a tangle of wire, mine fields, and then gradually transform what has been the enemy's fourth line of defense into a new first line trench ready to repel an attack.

The Lawyer
"Father," asked the little son, "what is a lawyer?"

"A lawyer? Well, my son, a lawyer is a man who gets two men to strip for a fight and then runs off with their clothes." —Buffalo Courier.

Germany, the Outcast

What Measure of Forgiveness Will Allies Extend to Enemy After the War

When peace is signed at last and the various combatants shake hands over it all, just what is going to be done with the German army? Will the allies extend to Germany?

Will it be the Biblical seventy seven, or will it be a mere lip affair?

German commercial aspirations will have to be curtailed. She will seek to regain her market by creating newer ones.

President Wilson, in his addresses to congress, has insisted that every nation at the close of the war shall be unhampered in its endeavor to expand and develop.

We shall insist upon this principle being applied to Belgium, to Poland, to the Balkan States, and to Russia, as far as the Bolsheviks will permit.

Evidently Austria will receive a fairly glad hand, while Bulgaria and Turkey will be recognized as having possibilities in the direction of becoming a strong and independent political power.

But in the case of Germany, that is something else again. We

can open our markets to her, but markets are of no avail if the people are not fed.

Conditions make it necessary to resume relations of any kind to a man who has shown himself to be a second-story artist, a murderer, a liar, and lost to every sense of decency.

Samuel Gompers, president of the American Federation of Labor, has

business with whom does not

keep ready to spring without an instant's warning at his throat. —Carnegie Magazine.

BABY'S HEALTH

IN THE SPRING

Spring is a time of anxiety to mothers who have little ones in the family. Conditions make it necessary to keep the baby cool, especially confined to overheated, badly ventilated rooms and catches cold which rarely kills him.

YES! LIFT A CORN OFF WITHOUT PAIN!

Cincinnati man tells how to dry off a corn or callus so it lifts off with fingers.

You corn-pestered man and woman suffer no longer. When the doctor says this Cincinnati authority, because a few drops of freezeone applied directly to a tender, aching corn or callus, it disappears. It is easily dried and the skin becomes clear and smooth again.

One corn-pestered man and woman suffer no longer. When the doctor says this Cincinnati authority, because a few drops of freezeone applied directly to a tender, aching corn or callus, it disappears. It is easily dried and the skin becomes clear and smooth again.

A small bottle of freezeone costs very little and drys out, will not stain clothing, and dries quickly.

It is safe, non-poisonous, non-irritating.

Two Feeding Experiments

Pork at a Cost of \$3.50 per 100

Pounds on Alfalfa

G. H. Hutton, superintendent of the Dominion Experimental Farm at Lacombe, in Alberta, said that 300 hogs will have been raised from the farm under his charge for the year ending with this month. He

said he had made pork at a cost of \$3.50 per 100 pounds on alfalfa ration and at \$3.00 per 100 pounds on rape pasture with self-feeder.

The saving that these pastures will effect in the cost of producing pork will be approximately \$100 per acre. Last year, on 240 hogs, covering the entire period from May 7 to January 19, it took 4.90 pounds of grain with pasture added to produce one pound of pork.

Harry Bell, whose farm is some fourteen miles from Edmonton, has a feeding cattle. His farm is crossed by theurgeon river, and on a sunny slope on the bank of this river he constructed a large self-feeder, to hold several loads of cut straw and green feed.

From this the cattle eat feed into a trough, from which the cattle feed at their leisure. It is only a few steps to the top of the hill, and the overhanging branches of the willow bluffs provide an open-air shelter.

During January, February and March of last year, he fed 85 loads of feed, of which 30 loads were green feed and 55 loads were straw. This lot of 85 loads of feed fed 70 head of steers for the three months that did well. Then a few bags of grain were mixed with the green feed. Thirty more loads of green feed were cut and blown into the feeder and the cattle were fed heavily until as they were being satisfied for the winter. The cattle were carried on this feed till the first week of June.

The herd of cattle, consumed 100 bushels of barley, per head, and 400 bushels of oats in addition to the feed.

They were bought at \$6.75 per hundred weight, and sold at \$10 per hundred weight. The total bill for every animal came to \$1,000 clear of all expenses.

Unless worms be expelled from the system, no child can be healthy.

Mother Graves' Worm Exterminator is the best medicine extant to destroy worms.

The rain this week helped the grain considerably. To the south of us the rainfall is reported to have been very heavy.

Mr. Cruickshanks, manager of the Union Bank, is spending a week's vacation at Lethbridge and other points.

The departmental school examinations for Grades 8, 9, 10, 11 and 12 will commence June 17th to the 26th, inclusive, in the Chinook school.

Jack McLean of Chinook, returned veteran, is canvassing for Calgary Canadian subscription contest. Jack will call on you and tell you all about it.

THE TRAIL BLAZER to greater Motor Car Value

From the standpoint of dollar for dollar value there's not a car made which offers more for your money than the famous Chevrolet Four-Ninety A.

Before the Chevrolet was made in Canada, good cars were all high in price.

But our enormous production and manufacturing efficiency enables us to sell the Chevrolet Four-Ninety A. at a price much lower than its value when compared with other makes of cars.

With the surplus power developed by the famous valve-in-head motor the owner of a Four-Ninety A. invariably is the "trail blazer."

Standard equipment includes speedometer, electric starting and lighting, ammeter, oil indicator light equipment, one man top, demountable rims, non-skid tires on rear wheels and many features usually looked for in cars much higher in price.

**THERE ARE CHEVROLET MODELS IN ROADSTER, TOURING AND SEDAN BODIES
